

SA Winegrape Crush Survey State Summary Report – 2015

Explanations and Definitions

INTAKE (CURRENT VINTAGE) DATA

Definition of regions

Regions have been defined in accordance with Geographical Indication (GI) boundaries. If a GI region has not been declared, or produces less than 5,000 tonnes, then the data is aggregated into the relevant GI zone. Disaggregation of data into smaller regions such as Southern Fleurieu and Mount Benson is available on request from Wine Australia.

Total crush

The total crushed is the total tonnes of grapes crushed from a particular source region, whether processed in that region, another region in SA or interstate. All wineries in Australia are included in the survey collection process. However, not all wineries respond to the survey - therefore the total tonnage reported may underestimate the true crush. It is estimated that the overall response rate for the survey is 90%; however, individual regions may vary. Reported fruit is separated into fruit produced from the winery's own or associated vineyards ("own grown") and from independent vineyards ("purchased").

Calculated average purchase value

The survey requests wineries to provide the total amount paid for each parcel of fruit purchased (or the price per tonne). This is the price paid for fruit of a particular variety at the point of receipt – NOT including freight. It includes any penalties or bonuses (eg Baumé) applied at the weighbridge, but DOES NOT INCLUDE other bonuses or adjustments such as end use quality bonuses, which are not available at the time the survey is conducted (May 2015).

The calculated average purchase value per tonne is the average amount paid per tonne of fruit across all wineries. Winery grown grapes are not included in the calculation of average purchase value; nor are grapes grown by companies connected with the winery or under lease arrangements.

Important note on average purchase value

There is considerable variation in the pricing arrangements made by different wineries. For example, some wineries make adjustment payments based on the average value per tonne reported in this survey and some pay quality bonuses based on the end use of the product. These additional payments are not included in the reported figures. The average price also does not give any indication of the distribution of prices, or variables that go into individual contracts. Therefore the average price should not be compared directly with an individual grower's arrangement. It should also be noted that in minor varieties there may sometimes be very few purchases contributing towards a calculated average purchase value.

Price dispersion data (shaded columns in Intake Summary tables)

All purchases for each variety are grouped into categories according to the price paid for that fruit. The tonnes in each category are converted into a percentage of the total tonnes purchased, giving an indication of what share of fruit was purchased in each price range category. The categories are given nominal titles of A to E for convenience but these do not correspond with grades used by any particular winery.

Estimated total value of all grapes

The estimated total value of all grapes is calculated by multiplying the average purchase value per tonne by all tonnes crushed. If there is a variety where there are no purchases, then the average purchase value across all other varieties of the same colour in the same region is used to determine an estimated value for the own grown grapes.

Explanations and Definitions cont.

PLANTING DATA

Source of planting data tables

Planting data is not collected by the 2015 Australian Wine Sector Survey. The information is obtained from the vineyard register maintained by the Phylloxera and Grape Industry Board of South Australia.

The Board is required under the Phylloxera and Grape Industry Act 1995 to maintain a complete and accurate register of grapegrowers in the state. All vineyard owners with more than 0.5 hectares are required by law to register with the Board, and to report details of their plantings on an annual basis. This information is kept strictly confidential.

Vineyard plantings are recorded by Geographical Indication. Planting details for smaller regions not included in the survey report are available on request from the Board.

For more information on registration of vineyards, please contact the Phylloxera and Grape Industry Board office on (08) 8273 0550.

Explanatory notes for planting data tables

1. Planting data tables are current as at April 2015 and include all plantings from the 2014 planting season.
2. Vines planted in a particular year may include topworked or replaced vines, as well as new plantings in virgin ground. Where vines have been replaced or topworked, the old variety record is removed. This explains why the area planted for earlier years may be different in the 2015 report compared with previous reports.
3. Where a zero (0) appears in a table, this may indicate the presence of a planting of less than 0.5 hectares, or it may indicate zero plantings. Rounding may produce a slight error in totals or percentages.

State summary

State and Regional overview

The total reported crush of South Australian winegrapes in 2015 was 716,574 tonnes. This is an increase for the fourth year in a row, with 10,557 tonnes (1.5%) above the 2014 harvest of 706,017 tonnes. Nationally, there was an estimated non-response rate of 10.0%; however a specific non-response rate for South Australia is not known.

The top three regions by volume in 2015 were the Riverland with 63.4% of the crush (454,184 tonnes), the Barossa Valley with 6.1% (43,889 tonnes) and Langhorne Creek 5.4%. The Riverland increased its production by 4% on the 2014 vintage, while Langhorne Creek was down by 20%. The Adelaide Hills had a better season resulting in a 28% increase in tonnes, while Eden Valley was up by 49%. After a low crop in 2014, Coonawarra saw an increase of 16% to 27,137 tonnes; however, Padthaway and Wrattenbully had further decreases of 8% and 5% respectively.

The total estimated value of the crush was \$447 million, up by \$24 million (5%) compared with 2014. The average purchase value per tonne across the state decreased from \$599 in 2014 to \$557 per tonne. However, the average purchase values for many of the major varieties in individual regions increased compared with the 2014 values.

Varietal overview

The red crush produced 422,776 tonnes, which was 2% lower than the 2014 crush (429,982 tonnes); whilst the white crush production increased by 6% to 293,816 tonnes crushed.

Shiraz was down by 3,000 tonnes (1.5%) and accounted for 49% (209,144 tonnes) of the red crush, with Cabernet Sauvignon second at 27% (113,701 tonnes – down by 10,000 tonnes) and Merlot third at 10% (41,528 tonnes). Among the white varieties, Chardonnay was up by 40,000 tonnes and accounted for 50% (147,064 tonnes) of the white production, with Colombard (11%), Sauvignon Blanc (10%)

Overview of Vintage Statistics 2015

and Muscat Gordo Blanco (8%) next. Muscat Gordo Blanco was down by 4,000 tonnes while production of the other major white varieties all increased.

Comparison to the five year average

Over the last five years (from 2010 – 2014), the average State production was 689,918 tonnes, with a low of 681,319 tonnes in 2013 and a high of 706,017 tonnes in 2014. The 2015 crush is up by 4% against the last five year average. It should also be noted that it is the fourth increase in a row and is the highest crush for the state since 2009.

Note: changes to the methodology for the survey collection in 2015 mean that direct comparisons of tonnages and prices with previous years should be interpreted with caution.

Vineyard plantings

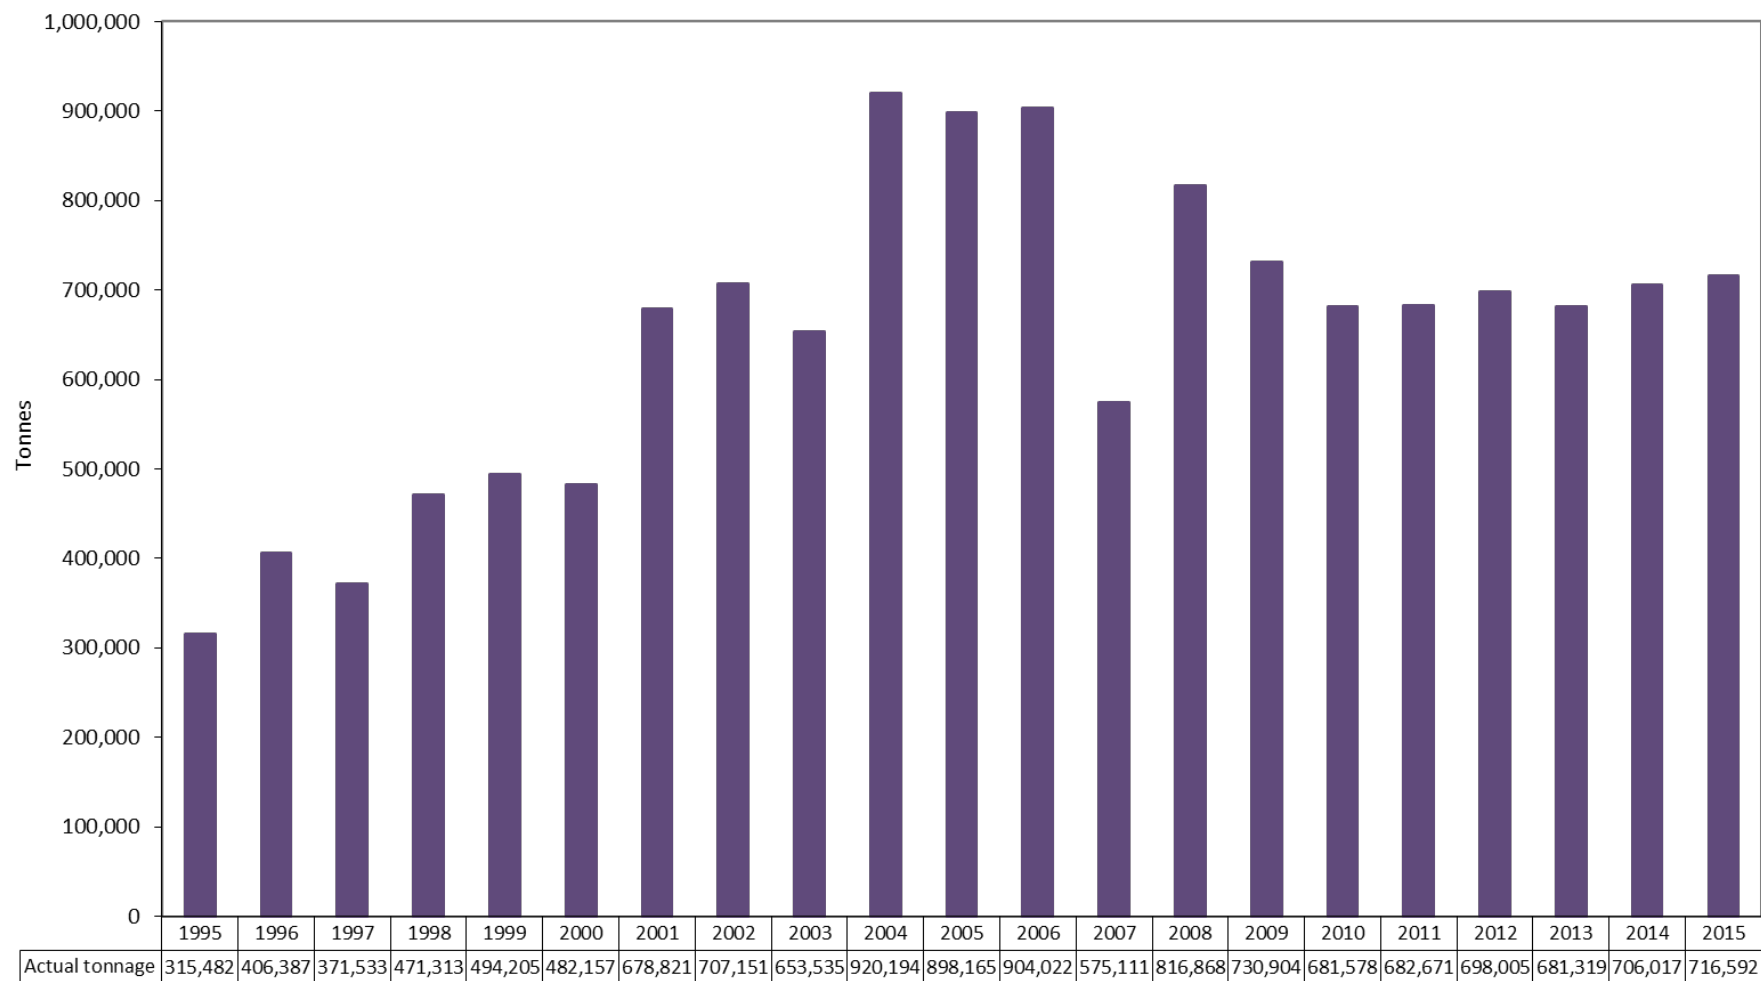

Planting data derived from the Phylloxera and Grape Industry Board's vineyard register shows that there were 76,118 hectares planted to vines in South Australia as at 30 April 2015. This represents a small decrease of 38 hectares since 2014, after net decreases in the previous three years of at least 377 hectares per year.

There was a total of 639 hectares (<1% of the total area) planted in spring 2014 (including top-working and replacements) compared with 536 hectares planted in 2013. Of the new plantings, red varieties accounted for 94% compared with white varieties at 6%. 85% of new plantings were Shiraz (347 ha) or Cabernet Sauvignon (193 ha).

There was a total of 3,403 growers registered with the Board as at 30 April 2015. This was 40 fewer than at the same time last year. 2,011 growers (59%) have properties smaller than 10 hectares and account for 11% of the total vineyard area, while 127 growers (4%) have properties larger than 100 hectares (in the same region) and account for 39% of the vineyard area.
