

Adelaide Hills Wine Region

NatureMaps 'quick start' guide

Information compiled by Dr Mary Retallack, April 2022

NatureMaps is an online program that can be used to source information for individual properties located in South Australia. This is a 'quick guide' to help get you started on your property planning project and it provides details of the major pre-European plant communities found in the Adelaide Hills Wine Region.

Step #	Instruction
Step 1	To get started open the following link https://data.environment.sa.gov.au/NatureMaps/Pages/default.aspx
Step 2	Select the 'start' button  and wait for the program to load
Step 3	Type your details in the 'find your address or location' bar 
Step 4	Select the best fit from the ALVS tab  and the map will zoom to your address
Step 5	Use the zoom 'in or out' buttons to navigate around the map (toggle out so you can see the region) 
Step 6	Select the 'layers' button at the bottom of the screen 
Step 7	Select the 'vegetation' layer  and then select the + button to open the drop down menu.
Step 8	Select 'Pre-European Vegetation' from the drop-down menu 
Step 9	Slide the bar to change the transparency of the layer selected 
Step 10	Place your cursor over a coloured area on the map to get more information about the selected layer. Then select 'view additional details' in the white summary box to access further details.
Step 11	Once you have identified the name of your local plant community you can search and download a list of plants here https://www.landscapesa.gov.au/hf/our-priorities/nature/native-plants-and-animals/native-plants/native-plant-species-lists

For further info see <https://data.environment.sa.gov.au/NatureMaps/Documents/NatureMaps%20Help%20Guide.pdf>

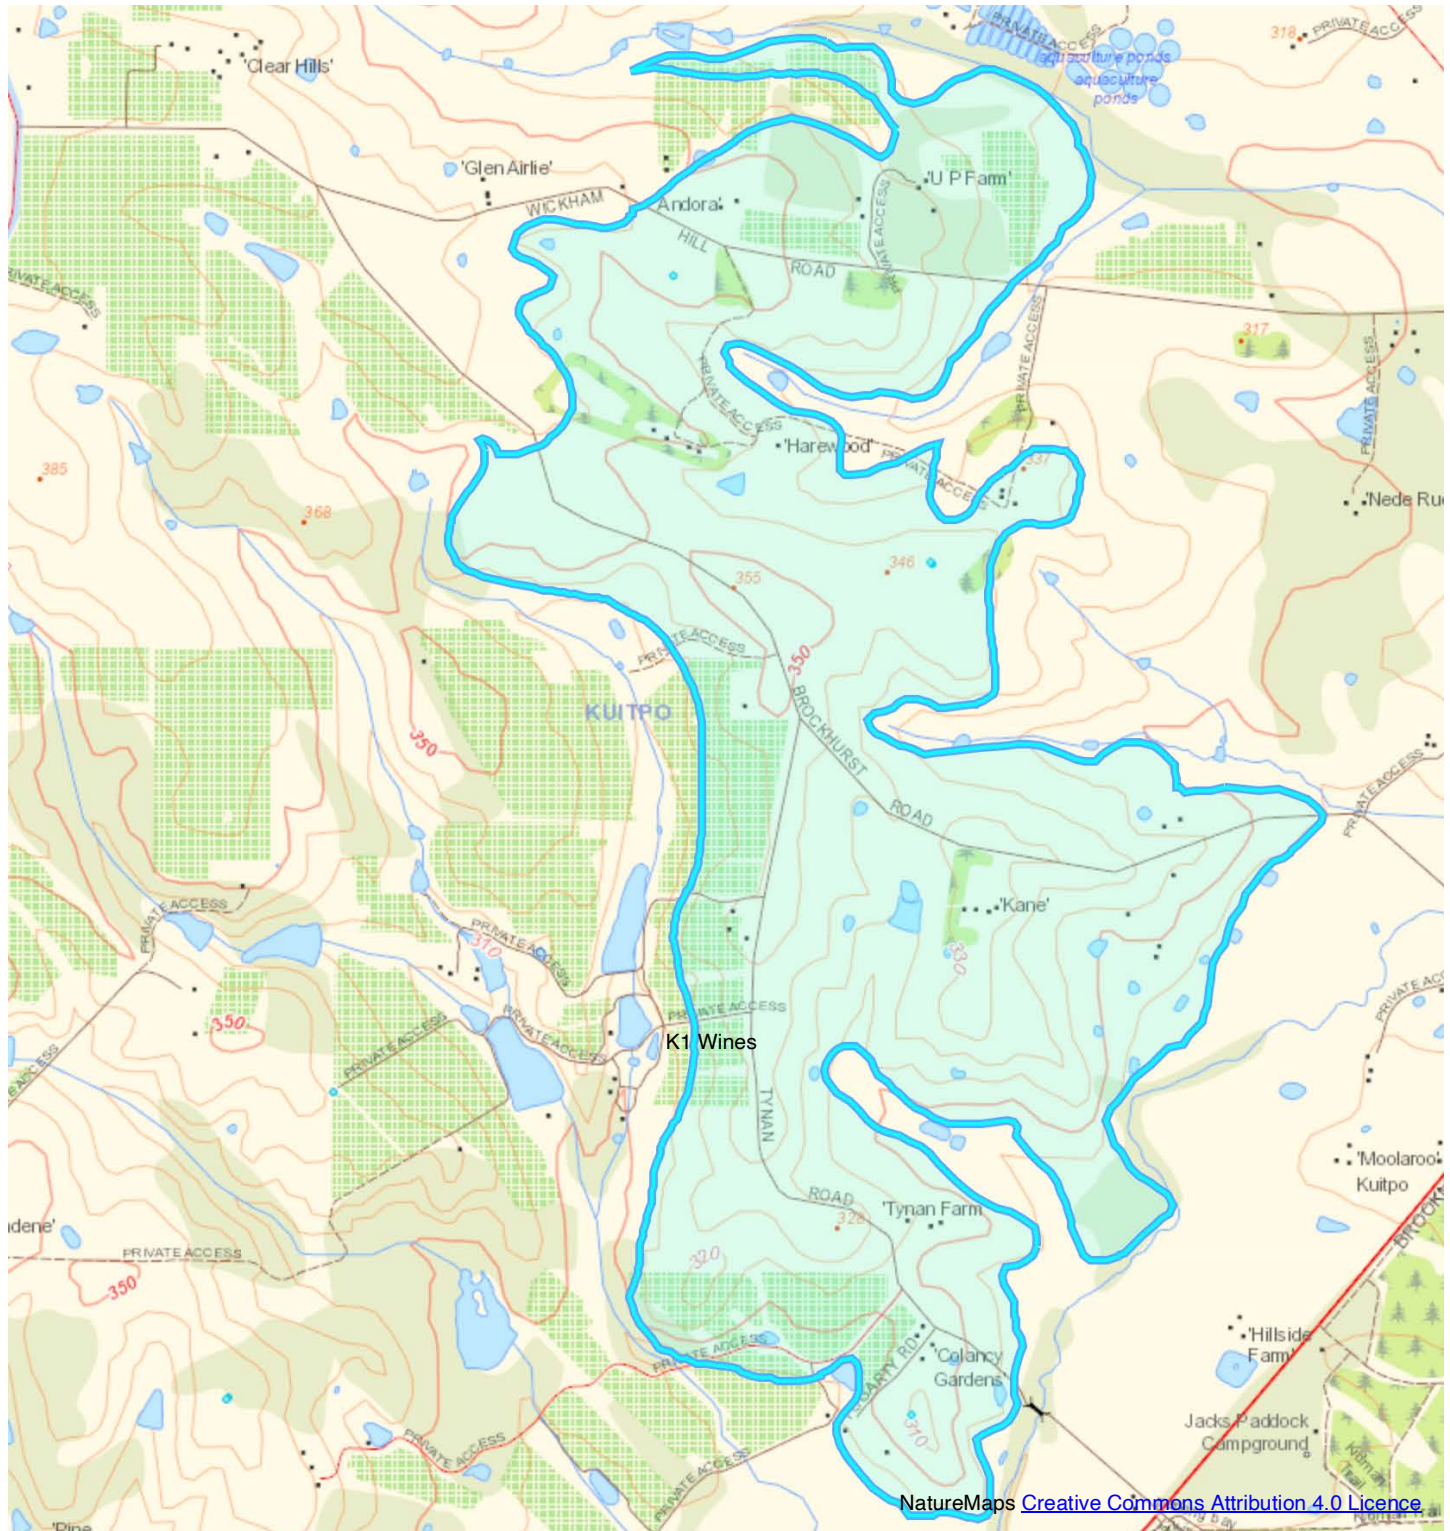

Please refer to the plant community lists below (which relate the location of the EcoVineyards demonstration sites) or enter your details into NatureMaps and follow the process above to access a plant list for your local area.

Stringybark, *Eucalyptus obliqua* open forest species list

This list may contain historical scientific or common names and includes plant species that grew naturally in this vegetation association that are commercially available. This information has been summarised from <https://www.landscape.sa.gov.au/hf/our-priorities/nature/native-plants-and-animals/native-plants/native-plant-species-lists> <https://www.stateflora.sa.gov.au/> and <http://plantselector.botanicgardens.sa.gov.au>. This information should be used as a guide only.

Habit	Genus	Species	Common name	Floral resources		Height (m)	Width (m)	Tolerance to frost	Flower colour		Flowering time
				Pollen	Nectar						
Tree	<i>Acacia</i>	<i>melanoxylon</i>	blackwood	yes	¹ yes	7 to 20	4 to 10	resistant	yellow		winter to spring
	<i>Acacia</i>	<i>pycnantha</i>	golden wattle	yes	¹ yes	4 to 6	2 to 6	moderately sensitive	yellow		winter to spring
	<i>Banksia</i>	<i>marginata</i>	silver banksia	yes	yes	2 to 8	1 to 5	resistant	yellow		spring to autumn
	<i>Eucalyptus</i>	<i>cosmophylla</i>	cap gum	yes	yes	3 to 8	5 to 10	resistant	cream		autumn to winter
	<i>Eucalyptus</i>	<i>leucoxylon</i> ssp. <i>leucoxylon</i>	SA blue gum	yes	yes	8 to 30	8 to 25	moderately sensitive	cream	pink	autumn to winter
	<i>Eucalyptus</i>	<i>obliqua</i>	messmate	yes	yes	15 to 40	12 to 25	moderately sensitive	white		summer
Shrub	<i>Acacia</i>	<i>gunnii</i>	ploughshare wattle	yes	¹ yes	0.2 to 0.8	1 to 2	resistant	yellow		winter to spring
	<i>Acacia</i>	<i>myrtifolia</i>	myrtle wattle	yes	¹ yes	1 to 2	1 to 2	moderately sensitive	yellow		spring
	<i>Acacia</i>	<i>verniciiflua</i>	varnish wattle	yes	¹ yes	3 to 5	3 to 5	moderately sensitive	yellow		winter to summer
	<i>Allocasuarina</i>	<i>muelleriana</i> ssp. <i>muelleriana</i>	common oak-bush / slaty sheoak	yes	no	1 to 3	2 to 3	moderately sensitive	insignificant		spring to summer
	<i>*Bursaria</i>	<i>spinosa</i>	Christmas bush	yes	yes	2 to 4	1 to 3	resistant	white		late spring to late summer
	<i>Daviesia</i>	<i>brevifolia</i>	leafless bitter-pea	yes	yes	0.6 to 1.5	0.5 to 1	resistant	orange		spring
	<i>Daviesia</i>	<i>leptophylla</i>	narrow-leaf bitter-pea	yes	yes	1 to 2.5	1 to 2	moderately sensitive	red	orange	spring
	<i>Daviesia</i>	<i>ulicifolia</i>	prickly bitter-pea	yes	yes	1 to 2	1 to 2	resistant	yellow	orange	spring
	<i>Goodenia</i>	<i>ovata</i>	hop goodenia	yes	yes	1 to 2.5	1 to 3	moderately sensitive	yellow		spring to summer
	<i>Grevillea</i>	<i>lavandulacea</i> ssp. <i>lavandulacea</i>	heath grevillea	yes	yes	1 to 1.5	2 to 3	resistant	red		winter to spring
	<i>Hakea</i>	<i>carinata</i>	erect hakea	yes	yes	1.5 to 3	1 to 2.5	moderately sensitive	white		spring
	<i>Hibbertia</i>	<i>exutiacies</i>	prickly guinea flower	² buzz pollinated (pollen only accessible to native bees)	no	0.3 to 0.5	0.5 to 1	moderately sensitive	yellow		spring
	<i>Ixodia</i>	<i>achillaeoides</i> ssp. <i>alata</i>	hills daisy	yes	yes	1	1	moderately sensitive	white		spring to summer
	<i>*Leptospermum</i>	<i>continentale</i>	prickly tea-tree	yes	yes	0.5 to 2	1 to 2	resistant	white		spring to summer
	<i>*Leptospermum</i>	<i>myrsinoides</i>	silky tea-tree	yes	yes	1 to 4	1 to 4	resistant	white		spring
	<i>Platylobium</i>	<i>obtusangulum</i>	holly flat pea	yes	yes	0.3 to 1	0.5 to 1	moderately sensitive	red	orange	spring to summer
	<i>Pultenaea</i>	<i>daphnoides</i>	large-leaf bush pea	yes	yes	1 to 2	0.5 to 1	moderately sensitive	red	orange	spring
	<i>Tetradlea</i>	<i>pilosa</i> ssp. <i>pilosa</i>	hairy pink-bells	yes	yes	0.2 to 0.5	0.2 to 0.5	moderately sensitive	pink		spring to summer

¹*Acacia* flowers do not produce nectar. However, the leaf and phyllode glands do secrete a nectar or sugary substance which bees, butterflies and other insects have been observed feeding on.

*Growers are encouraged to explore the use of *Bursaria spinosa*, *Leptospermum* ssp. and *Rytidosperma* ssp. as insectary plants in and around their vineyards (Retallack et al., 2019). It is anticipated a broader suite of native insectary plants could extend the richness and abundance of predatory arthropods in vineyards.

Stringybark, *Eucalyptus obliqua* open forest species list – continued

Habit	Genus	Species	Common name	Floral resources		Height (m)	Width (m)	Tolerance to frost	Flower colour		Flowering time
				Pollen	Nectar						
Strap leaved	<i>Lomandra</i>	<i>densiflora</i>	pointed mat-rush	yes	yes	0.2 to 0.6	0.2 to 0.6	resistant	green		winter to summer
	<i>Lomandra</i>	<i>multiflora</i> ssp. <i>Dura</i>	hard mat-rush	yes	yes	0.2 to 0.8	0.75	resistant	cream		winter to summer
	<i>Xanthorrhoea</i>	<i>sempi plana</i> ssp. <i>sempi plana</i>	grass tree	yes	yes	1 to 3	1 to 2	moderately sensitive	cream		winter to spring
Ground cover	<i>Austrostipa</i>	<i>nodosa</i>	tall spear grass	yes	no	0.5 to 1	0.5 to 1	resistant	green	brown	spring to summer
	<i>Kennedia</i>	<i>prostrata</i>	scarlet runner or running postman	yes	yes	0.1	1.5 to 4	moderately sensitive	red		winter to spring
	<i>Microlaena</i>	<i>stipoides</i> var. <i>stipoides</i>	weeping rice-grass	yes	no	0.1 to 0.7	0.2 to 1	moderately sensitive	cream		spring to summer
	<i>*Rytidosperma</i>	<i>setaceum</i>	small-flowered wallaby grass	yes	no	0.2 to 0.6	0.1 to 0.3	resistant	cream		spring to summer
	<i>Scaevola</i>	<i>albida</i>	pale fan flower	yes	yes	0.3 to 0.6	0.6 to 1	resistant	White		all year
	<i>Themeda</i>	<i>triandra</i>	kangaroo grass	yes	no	0.4 to 1	0.5 to 1	resistant	brown		frequent
Bulbs and lilies	<i>Dianella</i>	<i>revoluta</i> var. <i>revoluta</i>	black-anther flax-lily	² buzz pollinated (pollen only accessible to native bees)	no	0.3 to 1	0.5 to 2	resistant	blue		spring to summer
Climber (outside vineyard)	<i>Hardenbergia</i>	<i>violacea</i>	native lilac	yes	yes	climber	3 to 4	moderately sensitive	purple		winter to spring

² **Buzz pollination:** Some native bees use a special pollination technique called 'buzz pollination' (sonication) i.e. the blue-banded bee, bangs its head on the flower's anthers 350 times a second to release the pollen. Plants from the Solanaceae (nightshade) family (tomatoes, capsicums and eggplants) and many Australian native plants including *Hibbertia* ssp. and *Dianella* ssp. are buzz pollinated. These plants have the capacity to boost biodiversity and support populations of native bees but their pollen resources may not be readily available to predatory arthropods.

Native insectary plants (general)

It is reported that the longevity of parasitoid wasps which predominantly feed on nectar are significantly enhanced by Australian native plants including Christmas bush, *Bursaria spinosa*, crimson bottlebrush, *Callistemon* sp., Hakea, *Hakea* sp., prickly tea-tree, *Leptospermum continentale*, woolly tea-tree, *Leptospermum lanigerum*, austral trefoil, *Lotus australis*, creeping mint, *Mentha satereioides*, dryland tea tree, *Melaleuca lanceolata*, creeping boobialla, *Myoporum parvifolium*, sticky boobialla, *Myoporum petiolatum*, and wallaby grasses, *Rytidosperma* ssp.

In addition, a recent desktop review of plants native to South Australia identified a broader suite of locally-adapted native plants which are regarded as having the capacity to provide insectary benefits and may hold widespread appeal. They include wild rosemary, *Dampiera rosmarinifolia*, clasping goodenia, *Goodenia amplexans*, hop goodenia, *Goodenia ovata*, cut-leaf goodenia, *Goodenia pinnatifida*, boobialla, *Myoporum insulare*, long-leaved bush-pea, *Pultenaea daphnoides*, twiggie bush-pea, *Pultenaea largiflorens*, blue-rod, *Stemodia florulenta*, fairy fan-flower, *Scaevola aemula*, as well as species of *Acacia* ssp., *Eucalyptus* ssp., and *Lomandra* ssp. that may be suited to a particular site. Other plants previously identified for their insectary benefits in vineyards include straw wallaby grass, *Rytidosperma richardsonii*, windmill grass, *Chloris truncata*, and creeping saltbush, *Atriplex semibaccata*.

Climber (outside vineyard)	<i>Hardenbergia</i>	<i>violacea</i>	native lilac	yes	yes	climber	3 to 4	moderately sensitive	purple		winter to spring

¹*Acacia* flowers do not produce nectar. However, the leaf and phyllode glands do secrete a nectar or sugary substance which bees, butterflies and other insects have been observed feeding on.

*Growers are encouraged to explore the use of *Bursaria spinosa*, *Leptospermum* ssp. and *Rytidosperma* ssp. as insectary plants in and around their vineyards (Retallack et al., 2019). It is anticipated a broader suite of native insectary plants could extend the richness and abundance of predatory arthropods in vineyards.

² **Buzz pollination:** Some native bees use a special pollination technique called 'buzz pollination' (sonication) i.e. the blue-banded bee, bangs its head on the flower's anthers 350 times a second to release the pollen. Plants from the Solanaceae (nightshade) family (tomatoes, capsicums and eggplants) and many Australian native plants including *Hibbertia* ssp. and *Dianella* ssp. are buzz pollinated. These plants have the capacity to boost biodiversity and support populations of native bees but their pollen resources may not be readily available to predatory arthropods.

Native insectary plants (general)

It is reported that the longevity of parasitoid wasps which predominantly feed on nectar are significantly enhanced by Australian native plants including Christmas bush, *Bursaria spinosa*, crimson bottlebrush, *Callistemon* sp., Hakea, *Hakea* sp., prickly tea-tree, *Leptospermum continentale*, woolly tea-tree, *Leptospermum lanigerum*, austral trefoil, *Lotus australis*, creeping mint, *Mentha satereioides*, dryland tea tree, *Melaleuca lanceolata*, creeping boobialla, *Myoporum parvifolium*, sticky boobialla, *Myoporum petiolatum*, and wallaby grasses, *Rytidosperma* ssp.

In addition, a recent desktop review of plants native to South Australia identified a broader suite of locally-adapted native plants which are regarded as having the capacity to provide insectary benefits and may hold widespread appeal. They include wild rosemary, *Dampiera rosmarinifolia*, clasping goodenia, *Goodenia amplexans*, hop goodenia, *Goodenia ovata*, cut-leaf goodenia, *Goodenia pinnatifida*, boobialla, *Myoporum insulare*, long-leaved bush-pea, *Pultenaea daphnoides*, twiggie bush-pea, *Pultenaea largiflorens*, blue-rod, *Stemodia florulenta*, fairy fan-flower, *Scaevola aemula*, as well as species of *Acacia* ssp., *Eucalyptus* ssp., and *Lomandra* ssp. that may be suited to a particular site. Other plants previously identified for their insectary benefits in vineyards include straw wallaby grass, *Rytidosperma richardsonii*, windmill grass, *Chloris truncata*, and creeping saltbush, *Atriplex semibaccata*.

More information?

If you would like to find out more information about individual plants. Visit the Botanic Gardens of SA 'Plant Selector' <http://plantselector.botanicgardens.sa.gov.au>. Enter your postcode and press search. View the results and export data to retain a copy. The Excel spreadsheet contains detailed notes about each plant and its suggested uses.

Acknowledgement of country

The EcoVineyards project acknowledges Aboriginal people as the First Peoples and Nations of the lands and waters we live and work upon and we pay our respects to their Elders past, present and emerging. We acknowledge and respect the deep spiritual connection and the relationship that Aboriginal and Torres Strait Islander people have to Country.

The Peramangk and Kaurna people are the traditional custodians of the Adelaide Hills region and have an ongoing connection to the land.
